

## Redwood Road, 10600 South to 12600 South

### **Project Description:**                      **Design and reconstruction with roadway widening**

This is an urban reconstruction and widening project with raised median treatments, side street realignments and various utility and irrigation easements. The purpose of the project is to improve the mobility of the corridor and accommodate future travel demand through the 2030 design year. Improvements will also provide a safe and efficient multi-modal facility (accommodating vehicular, pedestrian, bicycle, and transit uses) as well as correct geometric, lighting, and drainage problems. By the design year, traffic is expected to nearly double, and traffic is already diverting to local roads to avoid congestion. Even with the project, intersections will remain congested, but the overall average delay will decrease more than 30 percent.

**Total Project Budget:** Approx. \$42 million (current cost estimate)

### **Anticipated Schedule:**

- A State Final Environmental Study was completed on March 7, 2005, approving the project's Preferred Alternative and leading the way to completion of the final roadway design, right-of-way acquisition, and construction.
- Design and right-of-way acquisition occurred throughout 2005 and will continue through early 2006.
- Construction is scheduled to begin in 2006 and will continue throughout 2007.
- As outlined in the Environmental Study, the implementation schedule for widening that is also planned between 12600 South and Bangerter Highway will be determined once funding becomes available.

NOTE: Schedule information listed above is estimated and could change without notice based on funding, scheduling constraints, stakeholder issues, and other unanticipated project elements.

### **Project Contacts:**

- **Michelle Page, Resident Engineer**
